Ion-exchange Water Softeners

- Water softeners are essential to protect equipment against limescale
- Ion-exchange softeners are suitable for dishwashers; for drinking water refer to our [calcium treatment units](#) page
- The manual softener is suitable for most front-loading dishwashers, however we recommend the fully automatic unit for pass-through machines
- Manual softeners require a regeneration process to be carried out at least once a week
- Full training and instruction card supplied
- Automatic softeners require occasional topping-up with salt

LT12

AT10
